

The Carrier Material For Cultivated Cell Transplantation

ATTRAN®

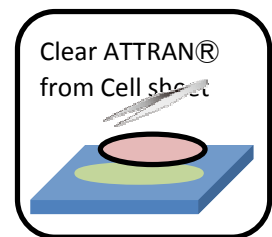

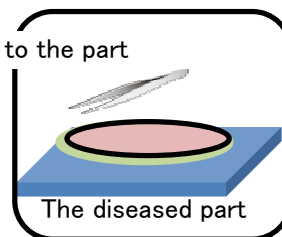

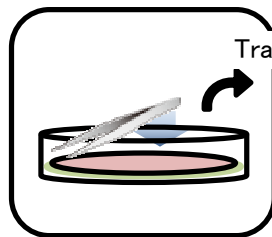

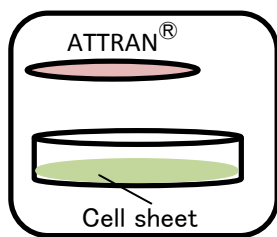

ア ト ラ ン

These distinctive properties were realized by applying special polymer to polylactic acid non-woven fabric.

Our new product has been created by applying special polymer on the polylactic acid non-woven fabric. Thus it is uniquely flexible and high in tracking to a cultured cell sheet and the affected body part. The time required for removing it from the affected part is half compared with that in case of using a common product. *our ratio

- Japan Patent Number:532051
- Applied to PCT

ATTRAN/アトラン® Product line-up ※Available various size

Product	Item No'	Diameter (mm)	Surface area (cm ²)	Sheet/1Pack
ATTRAN®	AT-025	25mm	4.906	20

○It may NOT used for human body. It is now under study.
